

**Please Amend the Abstract as follows:**

~~The present invention relates to an~~ An optical fiber (1') having at least one Bragg grating (11), the fiber comprising a core (2) surrounded successively by cladding (3) and by a coating (4), ~~said the~~ grating being obtained by being written directly in the core and/or the cladding of the fiber through the coating which is made of a material that is substantially transparent to ultraviolet type radiation used for writing ~~said the~~ grating, and wherein the material of ~~said the~~ coating contains a first polymer network interpenetrated by a second polymer.
